

Project Milestone 4: Testing

1. Feature 1: View Posts

- As a user, I want to be able to view all the posts
- When the user clicks on the button to view all posts, they are redirected to a page displaying all the posts that have been created by every user.

2. Feature 2: Create Posts

- As a user, I want to be able to create posts to have my questions answered
- Once the user clicks on the new post button they should be redirected to the create a new post page where they enter information such as title and content of the post. Once all information is put in, click on the post button which redirects you to the main posts page where you should see your new post among the posts.

3. Feature 3: Log in

- As a user, I want to be able to log in my account
- The user will start on a login screen where they should be able to enter their account credentials to login to their account. Once they have properly logged in they should be brought to their home screen and their posts should be able to be viewed.

4. Feature 4: Reply to Posts

- As a user, I want to be able to reply to posts and assist in the overall discussion
- When the user views a specific post, they have the option to click on the reply button under that post. When they click on the button, the user is redirected to a new page where they can enter their response in the text box. Once they finish inputting all the necessary information, they can click on the Post button which redirects them to the specific post with their reply under that post.
